AMANNGIRRBACH

**TOLERANCE, DURABILITY AND AESTHETICS  
ARE AMONG THE FEATURES THAT YOU  
SHOULD EXPECT FROM ADVANCED DENTAL  
PROSTHESES.**

BRIDGES AND CROWNS MADE OF ZIRCONIUM OXIDE CERAMIC ARE INDIVIDUALLY TAILORED PRECISION RESTORATIONS AND ARE INDISTINGUISHABLE FROM NATURAL TEETH.

Ceramic dental prostheses are no mass-produced products but are individually made to suit your requirements. A one-off piece that is not only precisely coordinated to your dental situation, but is also adjusted to fit in with your natural teeth as far as shape and colour are concerned. This creates a harmonious aesthetic appearance that revitalises and underlines your natural radiance.

### **Natural and aesthetic**

Crowns and bridges made of zirconium oxide are very aesthetic. The tooth-coloured material has the same translucency as the natural teeth and cannot be recognised as artificial prostheses even at the edges.

### **Ideal for allergic patients**

Dental prostheses made of zirconium oxide are metal-free and tissue-friendly and completely neutral.

### **Robust and durable**

Zirconium oxide is extremely resilient and thus suitable for the sensitive posterior area. Even large bridges such as implants made of zirconium oxide are absolutely stable.

### **Light and comfortable**

Zirconium oxide is much lighter than metal alloys. In addition, the low thermal conductivity of the material reduces the unpleasant hot and cold sensation.

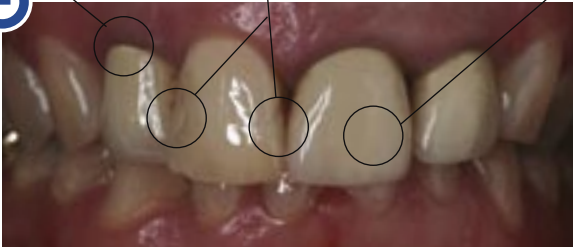

## **THE BENEFITS TO YOU AT A GLANCE**

- \_ Indistinguishable from real teeth**
- \_ Highly aesthetic due to natural appearance**
- \_ Form and colour can be individually adjusted to your dental situation**
- \_ Exceptional durability, stability and a long life**
- \_ Biocompatible, tissue-friendly and suitable for patients with allergies**
- \_ No unpleasant hot and cold sensation**

**Discolouration caused by  
an aged plastic filling used to  
repair the facing flaked off**

**Undesired  
discolouration of the gums**

**Missing translucency**

**BEFORE: BRIDGE WITH METAL FRAME**

**AFTER: BRIDGE FEATURING ZIRCONIUM OXIDE FRAME**

**No flaking or cracking due  
to the high bending strength  
of the material**

**No discolouration  
of the gums**

**Harmonic, natural  
aesthetics due to  
optimal light optics**
