This Online Training offers an introduction to the Match 2 CAM module for all those who have only worked with a Ceramill scanner and/or the CAD-software Ceramill Mind until now. Handling of the nesting function is explained, selection of blanks etc. and instructions on the operation and care of the milling unit.

Procedure
- Check of the technical requirements
- Step-by-step explanation of the complete process by the trainer
- How to operate the blank library, set up the blanks
- Placing the connectors, inclination angle, stabilisers
- Nesting and milling paths
- Transfer of the data to the milling unit
- System check of cutters, coolant etc.
- Care and maintenance instructions
- Questions from participants

Please note
- This course is intended for participants who have already operated the Ceramill system and are now also purchasing a milling unit
- A test case will be prepared by Amann Girrbach
